

Powerful Data Management Solutions, your ultimate competitive advantage

Information For Business Partners

Our Objective and Commitment is Simple...

Deliver a workable solution, on time, on budget and form a successful long term partnership with your company.

Our Services

Biomedical Data Solutions offers the IVD industry a partner who will develop fully customized solutions or configuration of off the shelf packages that can be offered under an OEM label to enhance your analyzer functionality and connectivity. This allows for significant distinction from the competition, by adding value with high quality, yet flexible data management solutions, enabling you to accelerate your instrument placements in the market.

Our software solutions provide a simple and flexible means of:

- Work listing and results management
- Dashboard display of critical information
- Capture of data in any format from any source
- Import/Export of instrument data to host system
- Flexible solutions for interfacing and connectivity of analyzers
- Pooling applications
- Interfacing multiple analytical platforms
- Linking liquid handling systems and analytical platforms

Value Statement

With more than three decades of experience to build upon, Biomedical Data Solutions is one of the world's leading software development companies for laboratory data management and analyzer communications.

Biomedical Data Solutions provides data management and middleware solutions for some of the leading diagnostic companies. Biomedical Data Solutions have a highly experienced and skilled team who will work with you to develop the most suitable solution for your requirements, enabling shorter time to market and lower development costs.

With over 5,000 systems placed worldwide, you can be confident that our solutions are proven. Biomedical Data Solutions offices in the UK, US and Romania work in an integrated fashion to ensure that your requirements are met effectively.

At Biomedical Data Solutions, we help solve software and data management challenges

Collaboration with our OEM Partners.

We can combine your specific knowledge of the various markets, reagent and instrument know-how with our applied expertise in software design and data management.

Well defined specification, close project management and the use of flexible modular software, ensures that projects will be completed on time, on budget and to your exact specification.

Flexibility

- Flexibility in software design enables efficient off-the-shelf solutions or highly customized functionality that empower you to differentiate solutions to your customers
- Flexibility in business partnership arrangements that are tailored to support your needs. Biomedical Data Solutions can customize contracts to include development, manufacturing, supply and support or specific combinations thereof

Reliability

- Reliability of our high quality proven solutions is backed by 5,000 worldwide installations
- Reliability of our project management process ensures that you have what you require, when you require it and within agreed budgets
- Reliability of our design control, testing documentation and supply documentation, takes the worry out of placing your software development in our hands

Experience

- Experience in direct laboratory environments enable our leadership and design team to understand the goals behind your requirements. This allows us to work collaboratively and consultatively with stakeholders from marketing and development teams to deliver products that truly meet the market need.
- Experience in developing 510(k) cleared software solutions in the highly regulated donor screening community, enables us to complement the regulatory process of our business partners. We understand the requirements for cleared products and work within appropriate guidelines to design, develop and deliver solutions that meet regulatory standards. We can file appropriate 510(k) documentation where needed and take the guesswork out of regulated software.

Our flexibility, reliability and experience provides unparalleled value. A partnership which allows you the opportunity to focus on your core business, while we focus on delivering software solutions tailored to your requirements.
